

Progress Report #1

Work Date / Hours Log

Date	Number of Hours	Description of Work Done
Sept 15	1	Kickoff meeting with project admin
Sept 16	2.5	Set up GitHub environment; Clone repo locally, installed Node.js + dependencies; Explored GitHub branch creation workflow
Sept 18	3	Research, project planning, Jira task breakdown, define KPIs
Sept 19	1.5	Kickoff follow-ups with project admin, clarify work scope and requirements
Sept 22	2.5	Created personal feature branch. Verified dev environment. Implemented Header.jsx skeleton (basic layout and logo placeholder)
Sept 23	3	Push Header.jsx to dev branch; Synced with dev branch, verified component rendering.
Sept 25	3	Fix header errors, enhanced responsiveness. Confirmed commits. Confirmed commits visible on branch dev

Description of Work Done

This week, I worked on both preparation tasks and UI implementation for the Admin Dashboard. The preparation phase included setting up the GitHub environment, cloning the correct repository, and installing dependencies. I also created a personal feature branch to check in my work regularly.

The main deliverables include three reusable UI components: Header.jsx, Sidebar.jsx, and Layout.jsx. These provide the navigation and structural framework for the Admin Dashboard. All components were tested locally and committed to my feature branch.

Issues encountered included: (1) mistakenly working in the wrong repo initially, which I fixed by migrating my work to the correct repo and branch, and (2) Tailwind configuration errors while styling, resolved by updating the tailwind.config.js.

Repo Check-in of Implementation Completed

The files/folders I have checked into the repository so far include:

- implementation/src/components/layout/Header.jsx – header component with navigation links (branch dev)
- implementation/src/components/layout/Sidebar.jsx – sidebar component with menu structure (branch: XinyuChen2023-patch-1)
- implementation/src/components/layout/Layout.jsx – wrapper layout combining header and sidebar (branch: XinyuChen2023-patch-1)

These commits are currently visible in the branch history

Commit 57928c6

XinyuChen2023 authored 2 days ago Verified

Create reusable components

Header, sidebar, main layout components

XinyuChen2023-patch-1

feat: enhance Header component with full-screen responsive design

- Add Tailwind CSS configuration and PostCSS setup
- Create assets configuration file for Header component
- Update Header component with full-screen width and responsive design
- Add fixed positioning and proper z-index for header
- Implement responsive breakpoints for mobile, tablet, and desktop
- Fix content spacing to prevent header overlap
- Add semantic HTML structure with main element
- Update App.tsx to showcase Header component with preview content
